

\$500 million Norwegian Frigate rammed by oil tanker

What if it happened north of Svalbard and it was the tanker that sunk instead?

Small exercise

1. What is the most likely oil spill?
2. What is the difference between deep (e.g. Deepwater Horizon) and shallow oil spill (e.g. Exxon Valdez)?
3. Where does the oil go?
4. What is the most important action for efficient oil spill clean-up?
5. What are the largest uncertainties for predictions?
